Algorithm Engineer

Bio. Graduated from Huazhong University of Science and Technology (HUST) with Bachelor's and Master's degrees, possessing 4 years of experience as an Algorithm Engineer. Career began at Ping An, later joined Ant Group as a Senior Algorithm Engineer, focusing on the application of machine learning and deep learning models in financial scenarios.

Responsibilities. My expertise centers on intelligent marketing and risk control in finance, leveraging advanced algorithms—including Multi-Task Learning, Recommendation Systems, Causal Inference, and LLM for Recommendation—which I've applied to business scenarios like loan marketing, product/channel recommendation and complaint management to drive growth.

🎓 Education

- September 2018–June 2021 **Master's Degree**, Statistics, *Huazhong University of Science and Technology*
Awards : Second Prize in the "Huawei Cup" Mathematical Modeling Competition, Runner-up in the "Huawei Cloud Cup" Artificial Intelligence Innovation Application Competition.
- September 2014-June 2018 **Bachelor's Degree**, Mathematics, *Huazhong University of Science and Technology*
Awards : Outstanding Graduate Honor

💼 Work Experiences

July 2024 - August 2025 , Senior Algorithm Engineer , Ant Shengxin (Shanghai) Information Technology Co., Ltd.

- Resampling and integrating the y-targeted easy-to-complaint model reduced customer complaints by approximately 20%;
- Adding MMOE with an attention mechanism for real-time task recommendations increased productivity by 10%;
- Combined principles of causal inference with allocation algorithm for data-driven channel selection.
- Leveraged LLM and prompt engineering on customer data to generate personalized marketing strategies.

Marketing Algorithms Multi-Constraint Operations LLM Amount Regression

July 2021 - July 2024 , Algorithm Engineer , Ping An Technology Shanghai Co., Ltd.

- Utilized feature engineering and Bayesian-optimized LightGBM ensembles to build a customer discovery model generating 2B CNY in sales.
- Leveraged IV and PSI for feature selection in customer profiling, and employed decision trees to derive risk strategy rules.
- Applied knowledge of LLM deployment and modeling for call classification, significantly boosting customer intent identification accuracy.

Marketing Algorithms Risk Control Strategy LLM

☰ Skills

- Programming :** **sql, python**, spark, LaTeX.
- Algorithm Principles :** *Proficient in Machine Learning algorithms :* RF, LR,XGBoost, LightGBM, etc.
 Proficient in Deep Learning algorithms : MMOE, PLE, DESCN, etc.
- LLM :** Familiarity with Prompt Engineering, Supervised Fine-Tuning (SFT), etc.

</> Projects

- August 2025
July 2025
- Identification of Complaint/Intercepted Customers, Ant Group Co., Ltd., Independent Responsibility
 - Augmented sparse MIIT complaint data by integrating labels from business-identified, complaint-prone segments to enrich model training;
 - Engineered telemarketing-specific features (e.g., Intelligent Call disposition, video software type) to enhance model performance;
 - Designed an A/B test plan; online experiments verified that removing top complaint-prone users reduced complaints by 20%.
- Deep Learning A/B Testing

August 2025 January 2025	Real-Time Task Recommendation for Cross-Selling, Ant Group Co., Ltd., Independent Responsibility ➢ Analyzed video task features (exposures, applications, conversions) for recommendation features; ➢ Built an improved MMOE model with task-aware attention mechanisms to dynamically enhance task-relevant features and improve capture of key information; ➢ Developed a real-time data-driven video decision interface enabling millisecond-level response for task recommendation. Task RecommendationAttention MechanismMMOEDecision Interface
June 2025 May 2025	Intelligent Call Notification Copy Generation, Ant Group Co., Ltd., Independent Responsibility ➢ Integrated multi-dimensional user profiles (industry, clues) and benefits, using Qwen-72B to automatically generate personalized telemarketing notification copy; ➢ Established a multi-round copy generation-evaluation-optimization mechanism, iteratively improving content based on A/B test feedback to ensure quality and alignment with business goals. LLMMulti-Round OptimizationCopy Generation
December 2024 June 2024	Channel Operations for Telemarketing, Ant Group Co., Ltd., Independent Responsibility ➢ Integrated customer and channel features to build a meta-learner Uplift prediction model; ➢ Solved for optimal customer-channel allocation using the PDAP allocation algorithm under budget and agent number constraints. Unlift ModelAllocation Algorithm
June 2024 January 2024	Call Classification, Ping An Technology, Member ➢ Utilized Large Language Models (LLM) to cluster customer dialogue transcripts for primary and secondary intent classification; ➢ Addressed challenges like multiple intents, synonyms, and overlapping intents to ensure accurate and consistent labeling; ➢ Modeled and labeled using provided datasets; collaborated with business units to validate standards and define necessary verification fields for future model optimization. LLMIntent Classification
December 2023 January 2023	Risk Strategy, Ping An Technology, Member ➢ Analyzed and processed 3,000+ features, finalizing over 300 features across 11 major categories for table creation; completed customer segment processing for loan products; ➢ Conducted feature mining using data mining algorithms (e.g., Apriori), machine learning algorithms (LightGBM), and correlation network filtering; ➢ Screened and backtested risk strategies using technical and business metrics, developing a complete mining and validation process. Feature ProcessingFeature MiningRisk Strategy
June 2023 July 2021	Loan Marketing , Ping An Technology, Member ➢ Addressed class imbalance using LightGBM model fusion, employed Bayesian Optimization for hyperparameter tuning, and enhanced model discrimination through advanced feature engineering and business understanding; ➢ Built multi-dimensional customer profiles from product perspectives, integrating user behavior and transaction features to dynamically optimize selection strategies, forming an iterative "rule pre-screening + model fine-screening" process for precise marketing and risk control. LightGBMBayesian OptimizationFeature EngineeringCustomer Profile

Strengths

Competencies :	Proven ability to drive projects from 0 to 1, establishing data-driven monitoring to exceed performance targets.
Collaboration :	Adept at mobilizing cross-departmental resources to ensure the seamless execution of complex initiatives.
Professionalism :	Highly self-motivated and responsible, with a proactive approach and committed to excellence.

Hobbies

Sports :	Badminton, dancing, table tennis
Art :	Photography, painting, film, visiting exhibitions
Other :	Traveling, listening to podcasts
